

Round 1 — Initial write

1. User: "My favorite city is Paris."
2. `Memory.write(key="city", val="Paris")`
3. `→ write_status = SUCCESS`

Round 5 — Conflicting update

4. User: "I moved to Tokyo last year."
5. `Memory.write(key="city", val="Tokyo")`
6. `→ write_status = SUCCESS (reported)`

Round 8 — Retrieval

7. `q = "What is the user's favorite city?"`
8. `result = Memory.read(q)`
9. `→ result = "Paris" ← STALE FACT`
